

FEATURED ALUM-A-LIFT ROTATING REEL GRIPPER WITH MULTI-TIER STORAGE CART

PROJECT 28163

MODEL B350CS-72

FEATURING Powered rotary gripper, powered rotation module, and tilt-up safety

HANDLING 200 lb [91 kg] reels

DETAILS Reels are filled with a pliable rubber ribbon for the manufacture of minimally invasive surgery barriers in the medical industry. The reel must be removed from the winding machine and rotated for vertical storage or the material will deform. A mobile storage cart maximizes available space in the manufacturing area. The rotary gripper allows for clocking of the reel when interfacing with the machine.
