

FEATURED ALUM-A-LIFT
 POWERED ROLL PUSHER WITH TWO POSITION RETRACT

PROJECT
30522

MODEL A800CSLR-72

FEATURING Powered Roll Pusher with Two Position Retract, Dual Diameter Docking Tip, Lateral Shuttle, Spring Overload Safety Device, Dual Direction Traveling Limit Switches, Leg Bumpers

HANDLING 375 lb [170 kg] Rolls

DETAILS When removing rolls from a slitting machine, the rolls are often touching faces. This powered pusher features two position retract. In the first position the boom is only long enough to fully engage one roll. After lifting a roll, the second position exposes the docking tip. The docking tip is designed to mate with both $\varnothing 3''$ and $\varnothing 6''$ diameter shafts. The lift also features a dual direction traveling limit switch, which automatically stops the lift at approximately the right height to offload the roll.
