

# FEATURED ALUM-A-LIFT TURBINE BLADE MANIPULATOR AND VACUUM HEAD

## PROJECT 30573

**MODEL** A800CLSR-72

**FEATURING** Pivoting vacuum head, powered trunion, two-segment articulated arm, on-board vacuum, quick exchange batteries with retainer strap

**HANDLING** 50 lb [23 kg] Blades

**DETAILS** When repairing and refurbishing aircraft engine turbine blades, they need to be manipulated and loaded into several pieces of equipment. The powered trunion and pivoting vacuum head allow the blade to be moved into almost any orientation. The articulated arm allows the lift to be parked near the equipment and then the blade manipulated into the required position to load into the equipment.
