

FEATURED ALUM-A-LIFT
TELESCOPING PLATFORM LIFT FOR DIE HANDLING

PROJECT
30763

MODEL A800CS-60

FEATURING Telescoping Platform, Deflection Compensation Module

HANDLING 300 lb [136 kg] Forming Dies

DETAILS Packaging manufacturers often use heavy metal dies to cut material into a desired shape. Loading these dies into a press machine presents an ergonomic challenge. This Alum-a-Lift features a handwheel-operated telescoping platform which allows operators to extend the die into the press machine for installation without the need to physically reach inside themselves. A handwheel-operated deflection compensation module ensures that dies are level during installation. Together, these features provide a safe and easy to use solution for operators.
